

IDEAL FOR:

- SCHOOLS
- ORCHARDS
- GOLF COURSES
- NURSERIES
- GREEN HOUSES
- COMMERCIAL SPRINKLING
- RESIDENTIAL SPRINKLING
- APARTMENT COMPLEXES
- HOTEL / MOTELS

SPECIFICATIONS:

- 110 volts or 220 volts
- Requires just 14" of floor space
- Unit is 30" tall
- UL, CSA Listed pump
- NSF approved solution

Stain Control for Sprinkle & Irrigation Systems

The Sprinkle-Clear System will reduce the problem of iron and hardness staining that has a tendency to form on driveways, buildings, shrubbery, and lawns.

Your landscaping will remain colorful and healthy due to Sprinkle-Clear's ability to minimize the chalky white coating and brown/orange staining normally caused by hard water.

THE SPRINKLE CLEAR SYSTEM

Simple Installation. The Sprinkle-Clear System comes ready to use. Simply connect the outlet to the main sprinkler line, fill the tank and plug it in.

Easy To Maintain. A Self priming pump eliminates the need for a service call when the storage tank is allowed to run out of chemical, simply refill the tank and the system is up and running again.

Versatile. The Sprinkle-Clear System is manufactured with a 15 gallon storage tank which is ample storage for most applications. Should you need more capacity, other sizes are available.

A Little Goes A Long Way. As little as one half gallon of sequestered chemical can treat up to 100,000 gallons of water.

Reliable Construction. The Sprinkle-Clear System is constructed of the highest quality materials and is backed with a 1 year manufacturer's warranty on the pump and a 5 year manufacturer's warranty on the tank.

BENEFITS OF USING THE SPRINKLE CLEAR SYSTEM

- **Reduces Stains.** The Sprinkle-Clear system will significantly reduce or eliminate stains caused by iron, magnesium, and hardness in water.
- **Drinkable Water.** The chemical agent (sequestering agent) used in the Sprinkle-Clear System as provided by the manufacturer is rated for use in drinking water and is certified by NSF (National Sanitation Foundation), USDA (United States Department of Agriculture), and the USEPA (United States Environmental Protection Agency).
- **Soaks into Root System Quickly.** The sequestering agent also treats the water surface tension allowing the water to soak into the root system quickly, reducing watering time, increasing plant yield, and reducing water run off that causes erosion.
- **Reduces Scale Build Up.** It saves money by reducing maintenance costs. Significant reduction of scale build up will reduce the maintenance requirements of your Sprinkle Clear System.
- **Corrosion Control.** The Sprinkle-Clear System provides corrosion control by coating the surfaces and protecting them from corrosion.

THE HISTORY OF TRUSCO

Since its inception in 1956, Trusco (Tru-Soft Co.) has continued to be a leading source of expertise and technology in the water treatment industry. Trusco manufactures all phases of water treatment equipment for residential and commercial applications. Our commitment to excellence in manufacturing, testing and engineering is backed by a staff of qualified professionals, each with the experience and knowledge to service all your water treatment needs.
